

TRANSLATING A SKETCH INTO A STORY

This foundational assignment asks you to bridge the gap between traditional architectural ideation and AI-assisted conceptualization. The hand sketch remains one of the most powerful and personal tools in a designer's repertoire — raw, immediate, and full of intent. Here, you will honor that tradition while extending it into the digital realm, using AI to amplify and articulate the ideas embedded in your first marks on paper.

Your task is to begin with a hand sketch of your pavilion design, then use AI image-generation tools to produce concept images that faithfully follow the geometry and spatial intent of your original sketch. The goal is not to replace your hand with a machine, but to use AI as a thoughtful collaborator that helps you explore and refine your vision. Finally, you will write a design narrative — evocative, precise, and emotionally grounded — that explains the story your pavilion is trying to tell.

YOUR THREE TASKS

1 SKETCH

Create a clear, foundational hand sketch of your pavilion design that communicates spatial intent.

2 GENERATE

Use RunDiffusion to produce concept images that closely follow your sketch's geometry and design direction.

3 NARRATE

Write a strong, evocative design narrative that contextualizes your pavilion and explains the emotional story behind the architecture.

RUBRIC BREAKDOWN

Criteria	Points
Clear, foundational hand sketch	3 pts
AI concept images retain original sketch geometry	4 pts
Strong, compelling design narrative	3 pts
Total	10 pts

- ☐ The AI images should feel like a direct evolution of your sketch, not a departure from it. Visible continuity between your hand drawing and your generated output is important.

Show your progress.

Clearly indicate the tools within the RunDiffusion portfolio that you have used to develop the visuals.
