

THOUGHT PROCESS: DIAGRAM, ELEVATION & MATERIALITY

PART A:

Great architecture begins with a clear idea — and that idea must be communicable. This assignment focuses on your ability to externalize your design thinking through diagrams. You will develop a series of architectural diagrams that clearly communicate the core design intent of your pavilion. Think concept diagrams, circulation studies, massing logic, or environmental response strategies. From these diagrams, you will use **RunDiffusion** to produce multiple diagrams. The emphasis here is on *meaningful* exploration — not random variation, but thoughtful iteration guided by your diagrams.

PART B:

This assignment challenges you to develop the visual and tactile language of your pavilion. You will produce architectural elevations that clearly show the pavilion's facade proportions, openings, structural expression, and surface articulation. Alongside these drawings, you will apply specific material choices to your design and curate a comprehensive moodboard. The moodboard should function as a design argument, tying together material textures, color palettes, environmental references, and precedent images that collectively justify and reinforce your design narrative. Every element on the board should have a reason for being there.

**STEP 1
DIAGRAM**
Develop a series of clear architectural diagrams that showcase the core design intent of your pavilion.

**STEP 2
ELEVATION**
Develop architectural elevations showing the pavilion's facade.

**STEP 3
MATERIALITY**
Apply materiality to your designs and curate a comprehensive moodboard.

Criteria	Points
Diagrams effectively communicate design intent	4 pts
Clear facade elevation	3 pts
Cohesive moodboard and materiality supporting the narrative	3 pts
Progress and thought process	5 pts
Total	15 pts
