

Generate a Multi Family
Residential Project in Oakland.
Use **Modern** Materials with **steel**
cladding and **curtain wall**,
modern **white** and shiny black
curtain wall with **clear glass** and
add people walking, biking and
nice landscape with trees on
sidewalk, **mid** day events

Enhance this four-story **mixed-use** residential **community** designed as a **modern** urban micro-hub — blending **senior** housing, **communal** living, and **boutique retail** into a compact, **efficient**, and **socially** active building. The intent is to create a **future-ready** neighborhood anchor that feels **light**, **transparent**, and connected to the **evolving** tech-forward identity of Downtown Oakland. The **ground** floor operates as a transparent **retail** plinth, with full-height **glazing**, slim **steel** frames, and **warm** interior **lighting** that spills gently onto the **sidewalk**. Boutique **shops**, micro-tenancies, and a clean, modern lobby create an active public edge. Above, **two** residential wings — **senior** housing to the **quieter** east, **communal** housing to the **west** — are organized around a **central courtyard** carved as a **geometric** void that brings **daylight** deep into the plan. **Upper** floors **step** back to create planted **terraces** and a **lighter** skyline profile. The architectural language is **crisp** and **modern**: rectilinear massing, **horizontal** window bands, **perforated** metal **shading** fins, high-performance glazing, and a palette of **light** concrete, **fiber**-cement panels, and **warm** wood accents. Circulation is expressed through a **vertical** glass ribbon that provides **intuitive** wayfinding and **soft** natural light. **Evening** Activation Layer: As daylight fades, the building **transitions** into a **warm**, **modern** evening presence. Soft LED strip lighting traces horizontal planes, creating a clean architectural **glow**. Perforated metal screens catch the **ambient** light, producing subtle patterns across the façade. The **courtyard** becomes a **modern urban garden** — layered landscaping with native **California** grasses, **slender** trees, **sculptural** planters, and **integrated** bench lighting. Low **bollard** lights and gentle **uplighting** on foliage create **depth** and **calmness**. The outdoor courtyard is alive with **people**: residents walking along **illuminated** paths, **seniors** moving comfortably through **well-lit** **circulation** zones, small **groups** gathering near **seating** edges, and community members **strolling** with pets. **Boutique** retail emits a warm, **inviting** glow, adding to the social energy. The **atmosphere** feels safe, modern, and communal — a **lively** evening micro-hub where residents and **visitors** enjoy themselves under a soft, **contemporary** dusk **ambiance**. **Evening Mood Summary**: Warm architectural lighting, modern landscaping, **active** courtyard life, people walking, some with pets, boutique retail glowing softly, calm social energy, **clean** modern atmosphere.

Render an **aerial** top-view **site** plan of the modern mixed-use housing project placed accurately on the 2400 Filbert • 57 st site plan. Show the four • 21 story building footprint aligned with the label area, surrounded by existing streets and structures. Use a clean, **modern** schematic style with subtle **evening** lighting — warm LED glow along facades, **illuminated** courtyard, and **landscaped** edges. Include **people** walking, some with **pets**, enjoying the courtyard and **retail** frontage. **Maintain** correct scale, **crisp geometry**, and soft dusk shadows. **Camera** angle: directly **overhead** with slight perspective **tilt** for depth. Render style: **modern** architectural schematic with muted palette and **clear** lifework.
