

AUTOMATING THE BLUEPRINT: FROM MODEL TO ISSUANCE

Architecture is about design, but successful project delivery relies on rigorous documentation. SketchPro AI automates the most tedious aspects of drafting so you can focus on the architecture itself. In this assignment, you will use **SketchPro AI** to take a live model from SD to CD.

You will be evaluated on the following outcomes: ensuring a full SD to CD sheet setup is successfully generated, correctly utilizing and maintaining firm standard templates; applying automated annotation so that dimensioning and tagging (doors, rooms, equipment) are accurately and comprehensively applied across all floor plans; executing live scheduling where schedules are fully generated, accurately formatted, and actively linked to the live model data; and achieving QA/QC resolution by successfully running automated checks to identify and document model issues or missing elements prior to final issuance.

STEP 1 SET GENERATION

Auto-generate floor plans and a complete SD to CD sheet set from the live model using firm templates.

STEP 2 ANNOTATION

Apply automated dimensioning and tagging to all doors, rooms, and equipment.

STEP 3 QA/QC & SCHEDULES

Extract live schedules and run automated checks to catch errors and prevent RFIs.

Criteria	Points
Setup & Standards	1 pts
Automated Annotation	3 pts
Live Scheduling	1 pts
QA/QC Resolution	5 pts
Total	10 pts

SketchPro AI provides a free account for this assignment. This is an optional assignment worth up to 10 bonus points. Even if SketchPro AI is new to you, attempting this assignment is a valuable learning experience — and partial credit is awarded for honest effort and documented exploration.
