

ANIMATE YOUR STORY

Static images can communicate space, but motion reveals it. This assignment challenges you to translate your pavilion design into a cinematic experience — one that moves through space, responds to light, and evokes the emotional qualities of your architecture through time. Video and AI-driven animation are increasingly essential skills for architects who need to communicate their vision to non-technical audiences, clients, and review committees.

You will create a video animation of your pavilion project, then use video editing software to refine it into a compelling, emotionally resonant piece. Technical quality matters — smooth camera paths, accurate geometry, believable lighting — but storytelling matters just as much. Think carefully about pacing, music, narration, and the sequence in which spaces are revealed. Ask yourself: what do I want the viewer to feel at the beginning, the middle, and the end? The strongest animations in this class will feel less like software demos and more like short films about architecture.

TWO-PART DELIVERABLE

01

ANIMATE

Create video animations of your pavilion — smooth, accurate, and architecturally faithful to your design intent.

02

EDIT

Use video editing software to refine the animation. Focus on creating emotional, compelling content that tells the story of the space through pacing, sound, and sequence. Approximately 30-60 sec.

RUBRIC

Criteria	Points
Technical quality and fluidity of the architectural animation	8 pts
Effective use of editing to create emotional resonance and narrative flow	7 pts
Total	15 pts

Your animation should feel curated, not exported. Every cut, transition, and moment of stillness is a design decision. Add some bold statement too!
