

BUSINESS STRATEGY

Architecture is not just about designing great spaces; it is also about winning the work. Business Development (BD) requires strategic thinking, market analysis, and a highly compelling narrative. Generative AI can accelerate this process by helping you brainstorm strategies, analyze client needs, and draft persuasive pitch concepts.

In this assignment, you will use AI to develop a short business development strategy and a proposal concept for a fictive pavilion project. You will be evaluated on your ability to define a clear **market strategy and target client**, articulate a **unique value proposition**, outline an innovative **proposal concept**, and draft a persuasive **executive summary**.

MINI PROPOSAL & STRATEGY

Your strategy should be clear, actionable, and grounded in the specific context of your pavilion. Avoid vague generalities — strong proposals make specific claims about value, timeline, and differentiation. Think about what makes your approach unique and why a client should choose you.

**STEP 1
STRATEGY &
POSITIONING**

Use AI to define your target client, their key business drivers, and a unique value proposition that clearly differentiates your firm from the competition.

**STEP 2
PROPOSAL
CONCEPT**

Outline the core architectural theme, material approach, and programmatic elements of your pavilion design.

**STEP 3
EXECUTIVE
SUMMARY**

Draft a short, persuasive pitch tailored to the target client that synthesizes your BD strategy and architectural concept into a compelling narrative.

Criteria	Points
Strategy & Positioning	4 pts
Concept Alignment	3 pts
Persuasive Delivery	3 pts
